Course Title: Graphic Designing

Course Code: CIT - 344

LECTURE 07:

INTRODUCTION TO CORELDRAW

Chapter Overview

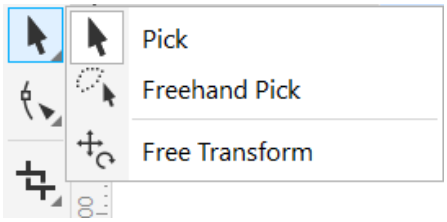

Tools in CorelDraw 2025

Prepared by: **Engr. Miss. Ayesha Zulfiqar**

1. Pick tool

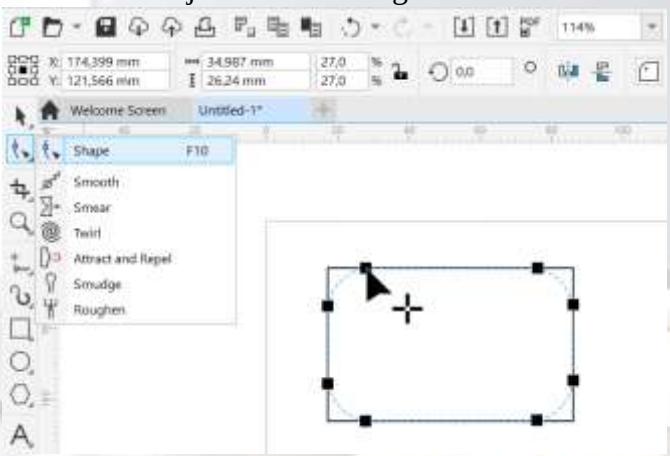

The Pick Tool is used to select objects and adjust their size and position. It also includes additional tools, such as:

- Freehand Pick Tool: Used to select objects freely.
- Free Transform Tool: Used to adjust the size and scale of objects.

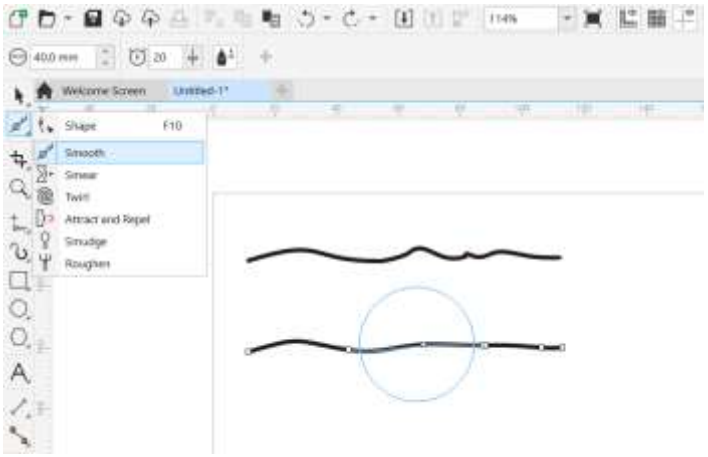

2. Shape tool

The Shape Tool is used to create or modify objects into different shapes by adjusting their nodes. The corners of an object can be changed to become rounded or sharper.

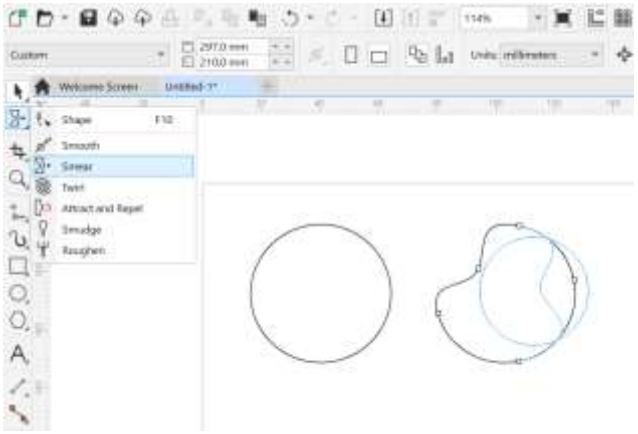

3. Smooth tool

As its name suggests, the Smooth Tool is used to straighten or smooth lines and sketches created in a design.

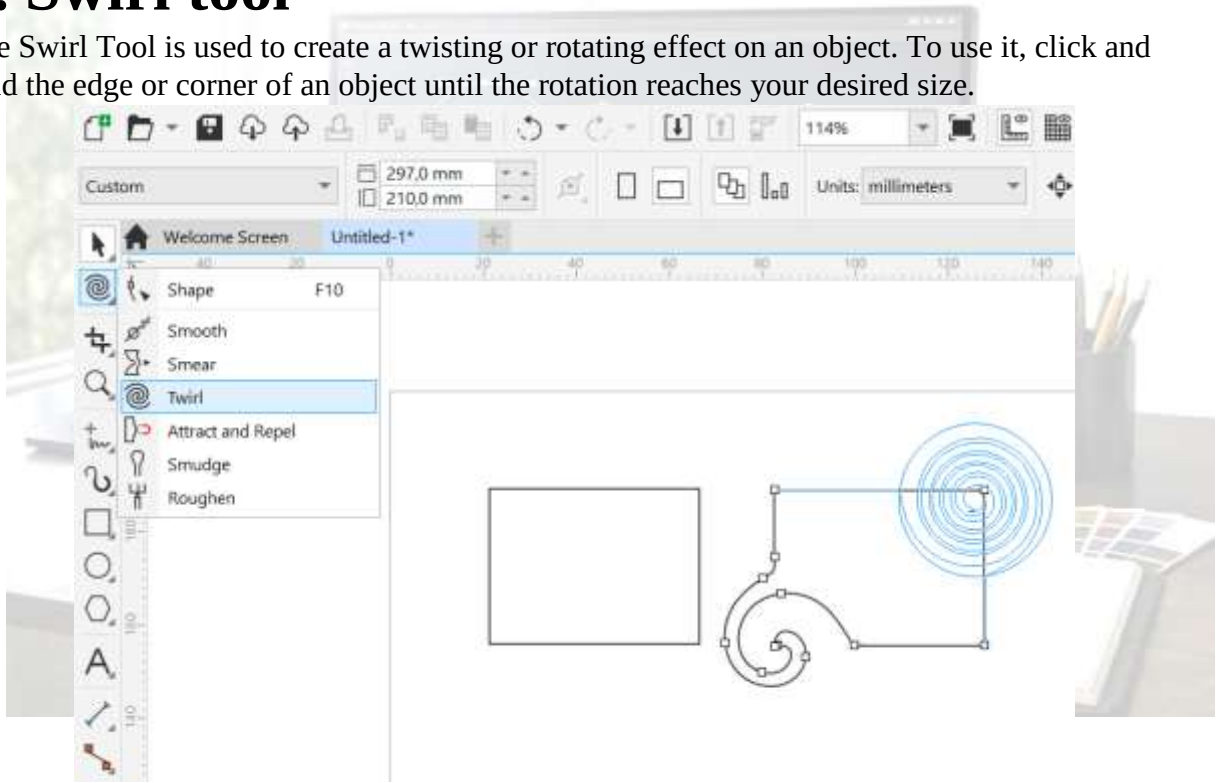

4. Smear tool

The Smear Tool is used to modify parts of an object by creating curved shapes. You can drag a selected part of an object inward or outward to create a new shape.

5. Swirl tool

The Swirl Tool is used to create a twisting or rotating effect on an object. To use it, click and hold the edge or corner of an object until the rotation reaches your desired size.

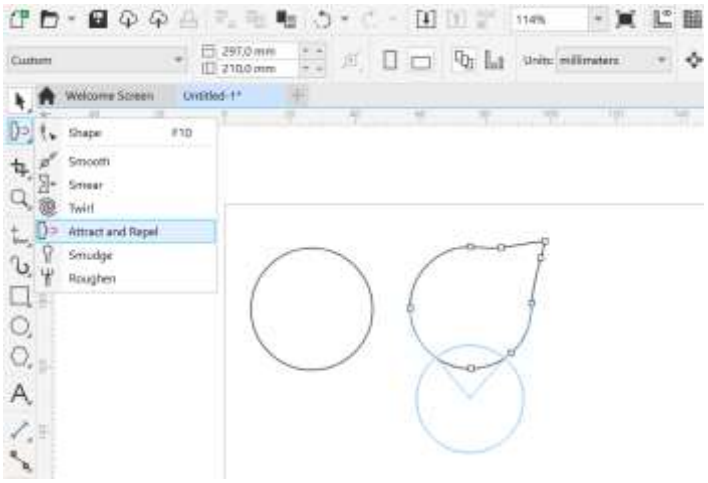

6. Attract and Repel tool

This tool is particularly useful for creating illustrations, sketches, and cartoons.

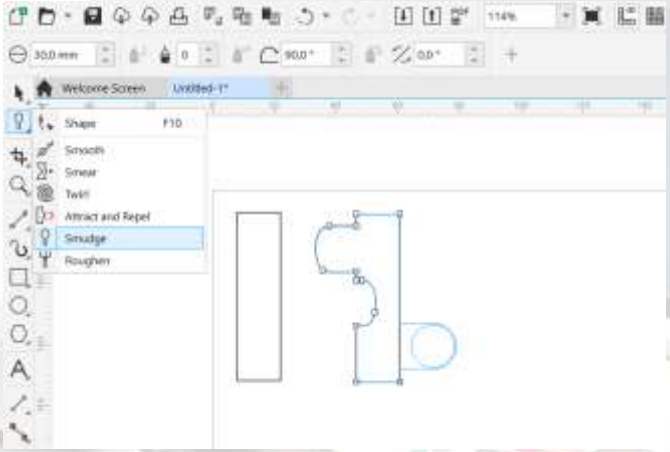

The Attract and Repel Tool is used to modify parts of an object by making them curved or pointed. To use it, click and drag inward or outward from the selected part of the object.

For a smoother effect, drag while holding down the mouse button.

7. Smudge tool

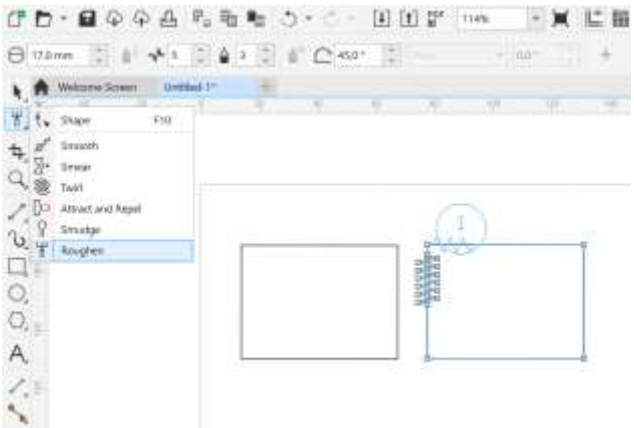

The Smudge Tool is used to modify parts of an object by creating rounded or curved shapes. Click on the outline of the selected object and drag to change its shape freely.

8. Roughen tool

The Roughen Tool is used to modify parts of an object, especially its outlines, by creating sharp or jagged edges similar to a saw.

To use it, click on a part of the object and drag. This tool can also be used to create grass or other objects with rough edges.

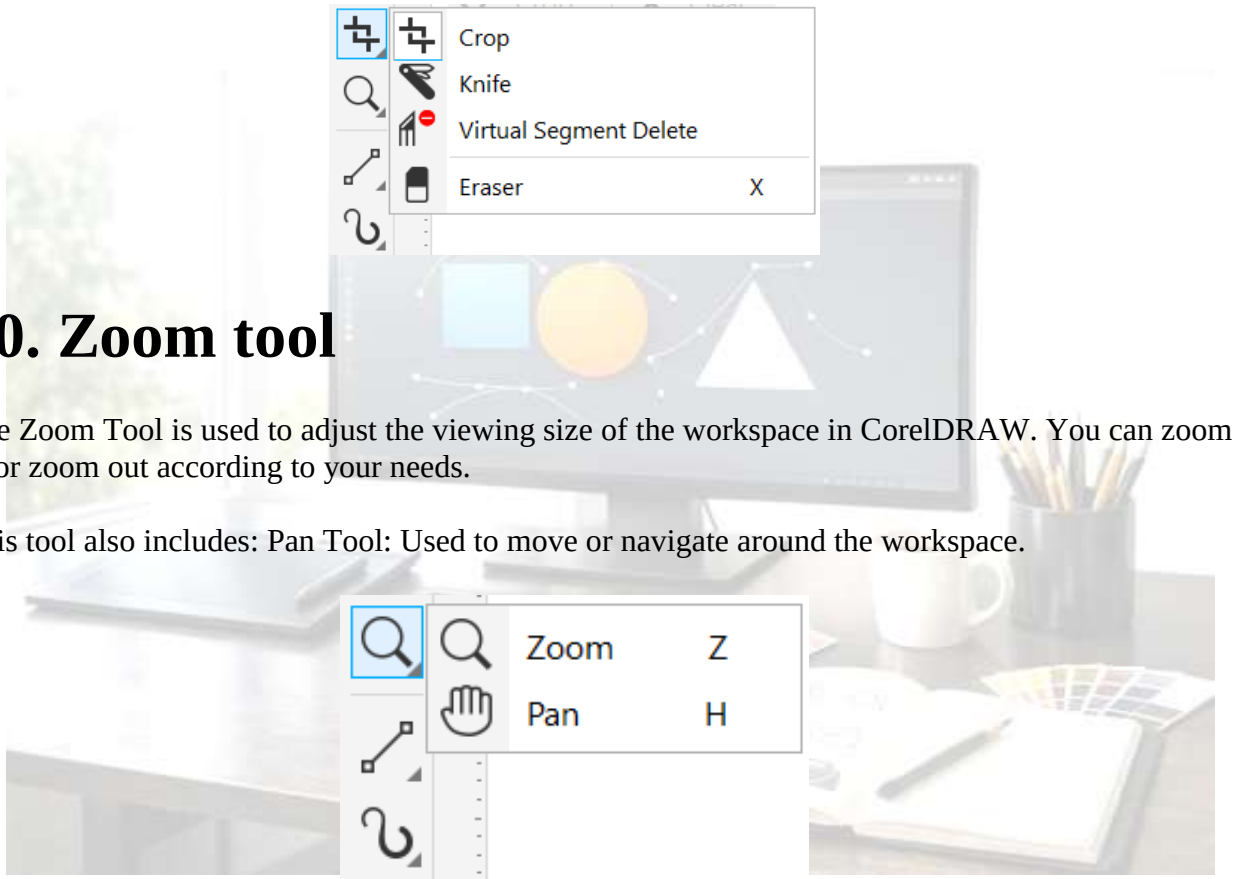

9. Crop tool

The Crop Tool is used to cut and remove unwanted parts of an object or image. Simply select the area you want to keep or remove.

In addition to the Crop Tool, there are other useful tools:

- Knife Tool: Used to cut an object into separate parts.
- Virtual Segment Delete Tool: Used to delete unwanted sections of an object, especially where lines intersect.
- Eraser Tool: Used to remove unwanted parts of an object or image.

10. Zoom tool

The Zoom Tool is used to adjust the viewing size of the workspace in CorelDRAW. You can zoom in or zoom out according to your needs.

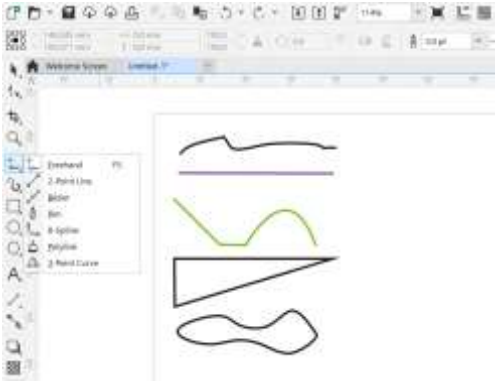

This tool also includes: Pan Tool: Used to move or navigate around the workspace.

11. Freehand tool

The Freehand Tool is used to draw freehand lines that can be used to create illustrations and designs.

It also includes several additional tools:

- 2-Point Line Tool: Used to draw a straight line between two points.
- Bézier Tool: Used to draw curved lines by connecting different points.
- Pen Tool: Used to draw curves directly and convert them into objects.
- B-Spline Tool: Used to create smooth curved lines.
- Polyline Tool: Used to draw straight or freehand lines continuously.
- 3-Point Curve Tool: Used to create a line or curve using three points.

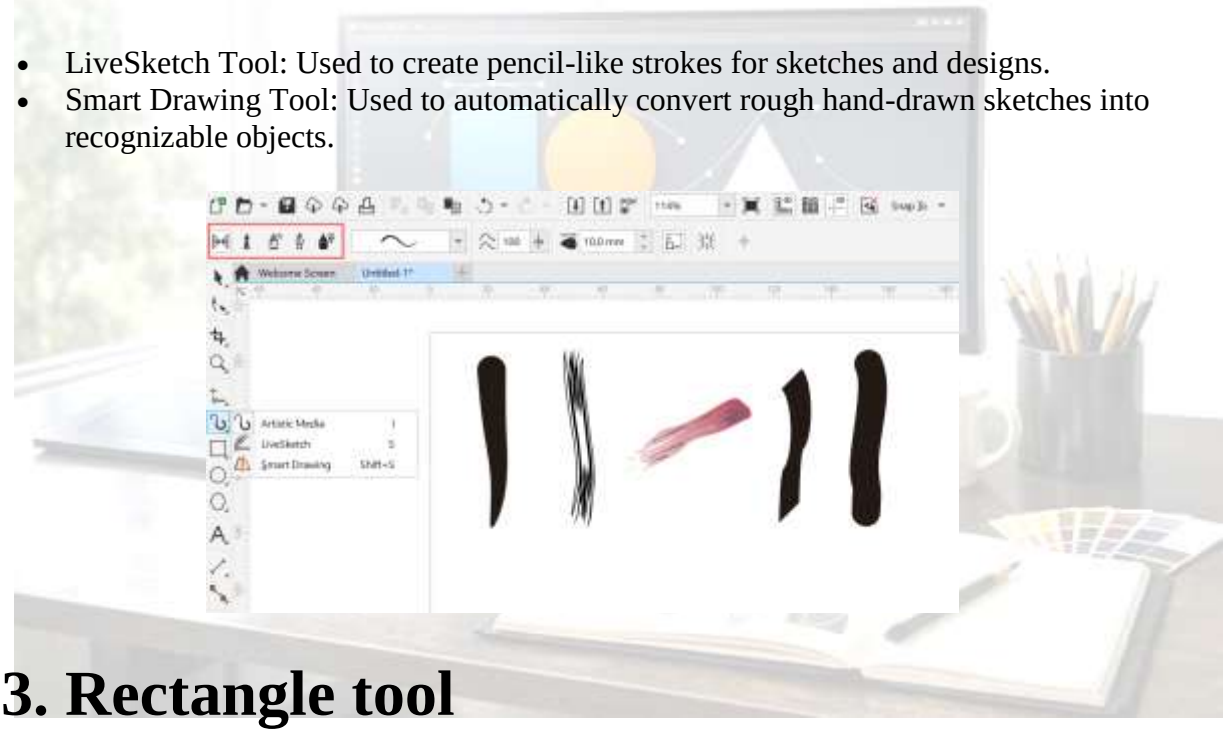

12. Artistic Media tool

The Artistic Media Tool is used to create lines with different shapes and styles, such as brushes, sprayers, calligraphic strokes, and expressions.

It also includes additional tools:

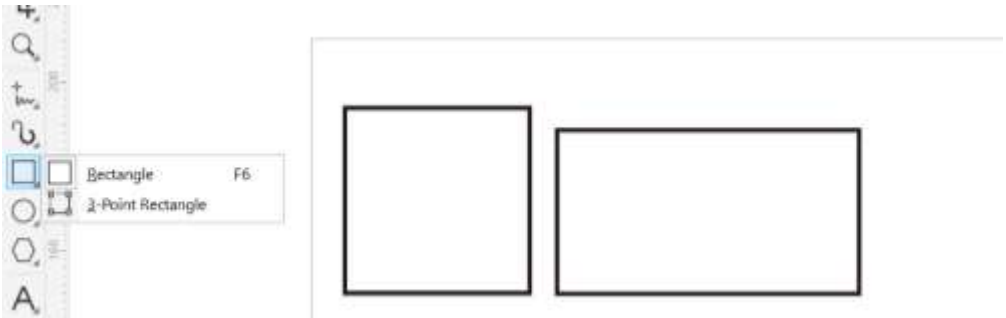

- LiveSketch Tool: Used to create pencil-like strokes for sketches and designs.
- Smart Drawing Tool: Used to automatically convert rough hand-drawn sketches into recognizable objects.

13. Rectangle tool

The Rectangle Tool is used to draw rectangular and square-shaped objects.

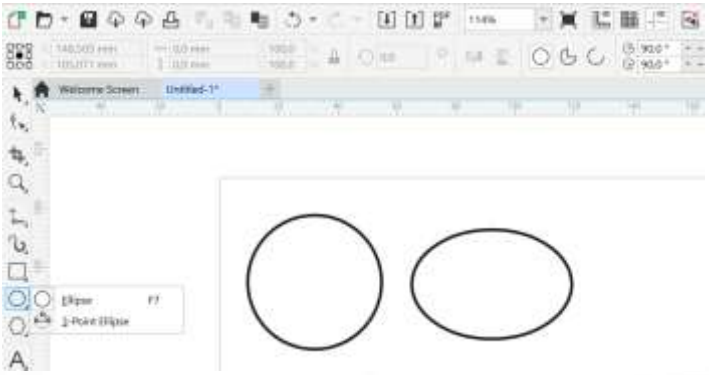

It also includes: 3-Point Rectangle Tool: Used to draw rectangles by defining their direction and dimensions using three points.

14. Ellipse tool

The Ellipse Tool is used to draw circular and oval-shaped objects.

It also includes: 3-Point Ellipse Tool: Used to create an ellipse by defining it with three points.

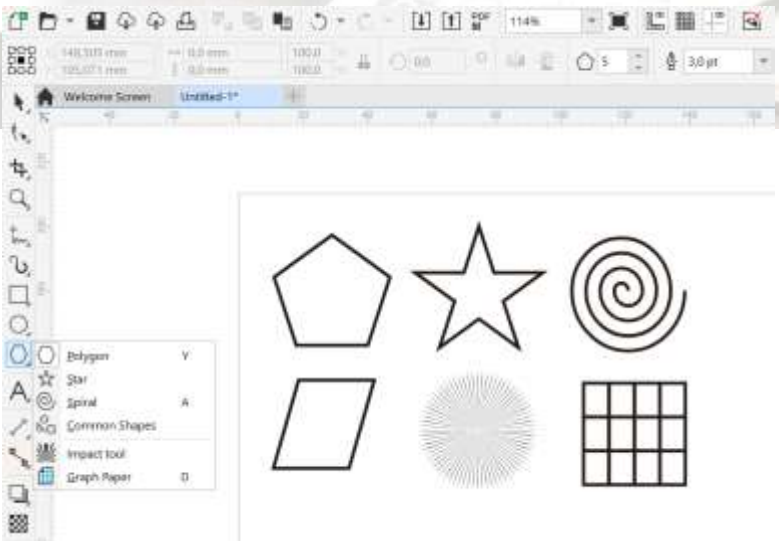

15. Polygon tool

The Polygon Tool is used to create objects with different numbers of sides, such as pentagons, hexagons, and other polygon shapes.

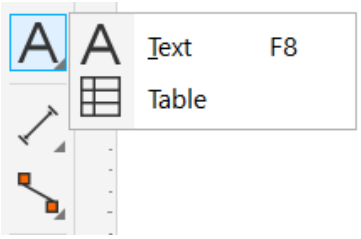

It also includes several additional tools:

- Star Tool: Used to create star-shaped objects.
- Spiral Tool: Used to create spiral-shaped objects.
- Common Shapes Tool: Used to create different shapes, such as parallelograms, arrows, and many other objects.
- Impact Tool: Used to create objects with radiating lines, similar to rays of light.
- Graph Paper Tool: Used to create grid-like objects, such as tables or arrangements of squares.

16. Text tool

The Text Tool is used to create text and text-based objects. It can also be used to add text inside or around other objects.

17. Table tool

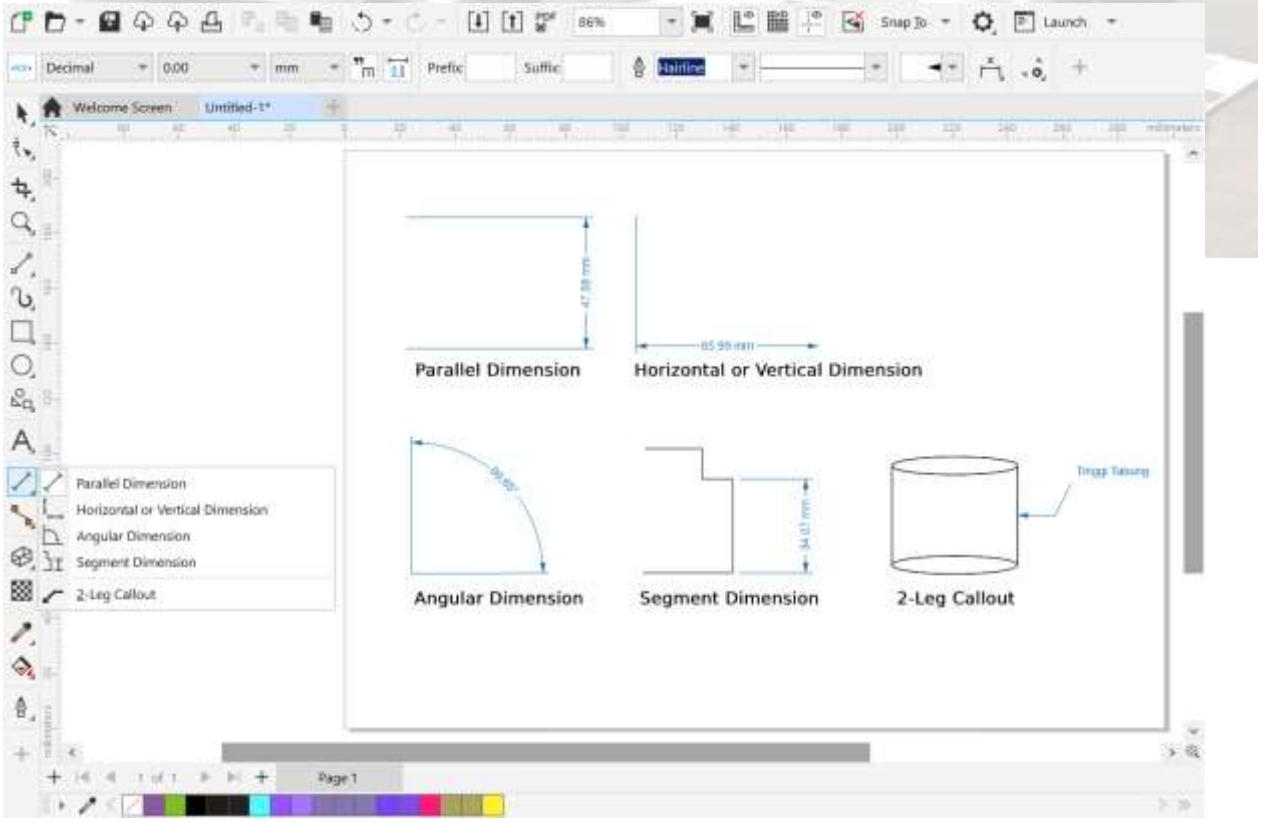

The Table Tool is used to create table-shaped objects. You can also add text inside the table cells.

18. Parallel Dimension tool

The Parallel Dimension Tool is especially useful for designing buildings and architectural drawings. It is used to create measurement lines that display the length and width of an object.

It also includes several other tools:

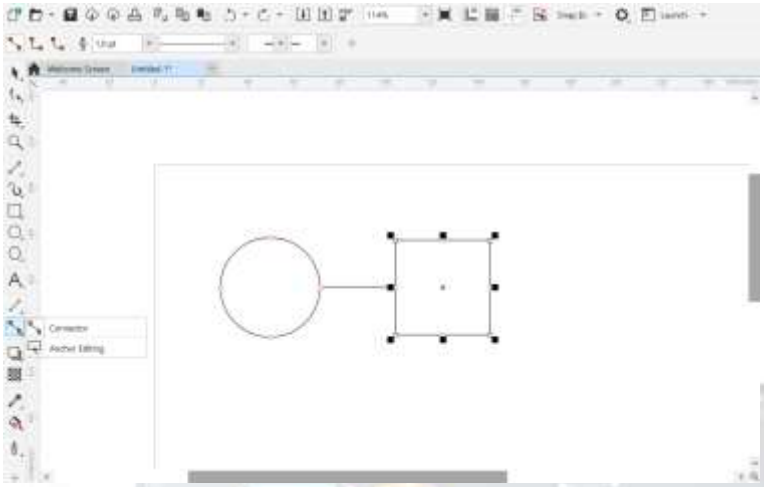

- Horizontal or Vertical Dimension Tool: Used to create measurement lines in horizontal or vertical directions.
- Angular Dimension Tool: Used to measure and display the angle of an object.
- Segment Dimension Tool: Used to display measurements of specific sections of an object.
- 2-Leg Callout Tool: Used to create pointer lines that identify specific parts of an object.

19. Connector tool

The Connector Tool is used to create connecting lines between two or more objects.

It also includes: Anchor Editing: Used to adjust the positions of connection points between objects.

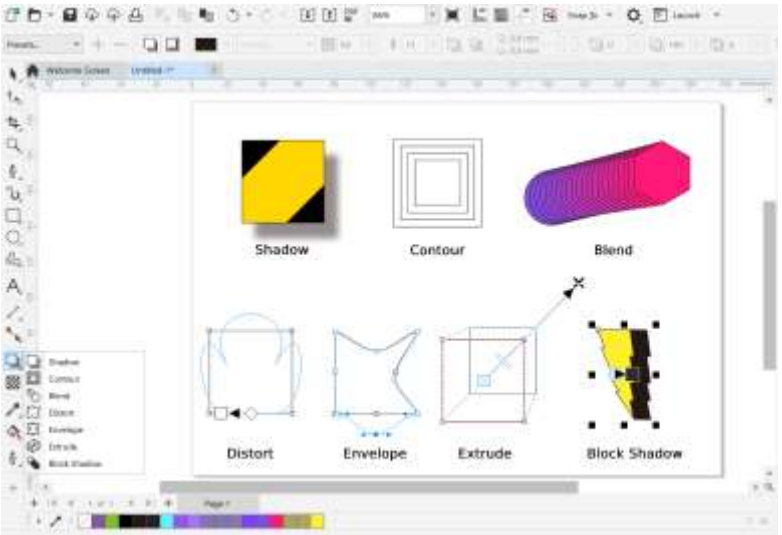

20. Shadow tool

The Shadow Tool is used to apply shadow effects to objects.

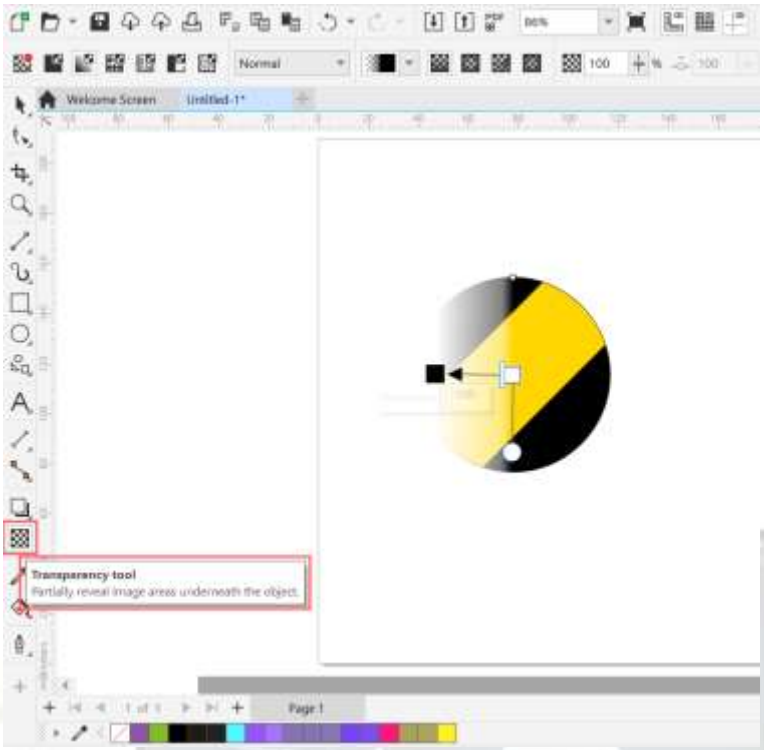

It also includes several other tools that can create interesting effects:

- Contour Tool: Used to create multiple objects that follow the shape of the original object.
- Blend Tool: Used to create a smooth transition between two different objects.
- Distort Tool: Used to change the shape of an object by dragging its outline.
- Envelope Tool: Used to bend or reshape selected objects.
- Extrude Tool: Used to add a three-dimensional (3D) effect to an object.
- Block Shadow Tool: Used to create thick shadow effects based on the object's shape and direction.

21. Transparency tool

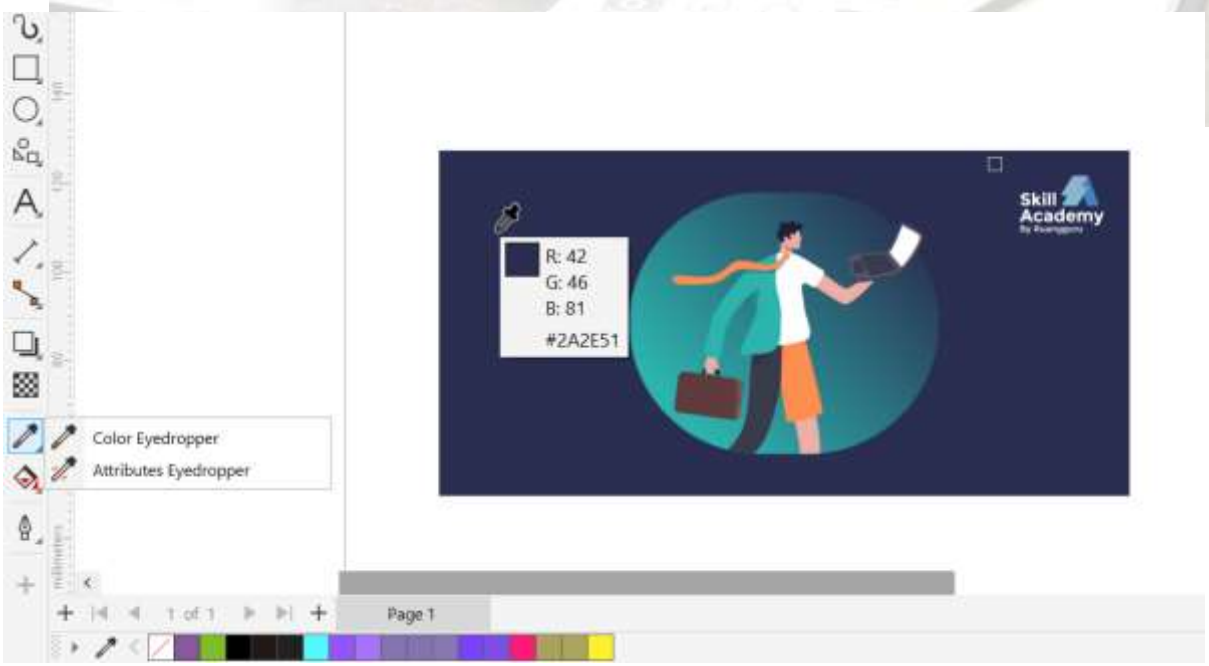

The Transparency Tool is used to make part or all of an object transparent.

22. Color Eyedropper tool

The Color Eyedropper Tool is used to pick a sample color from an object and apply it to another object through the color controls.

It also includes: Attributes Eyedropper Tool: Used to copy attributes from an object, such as its outline, fill color, and effects.

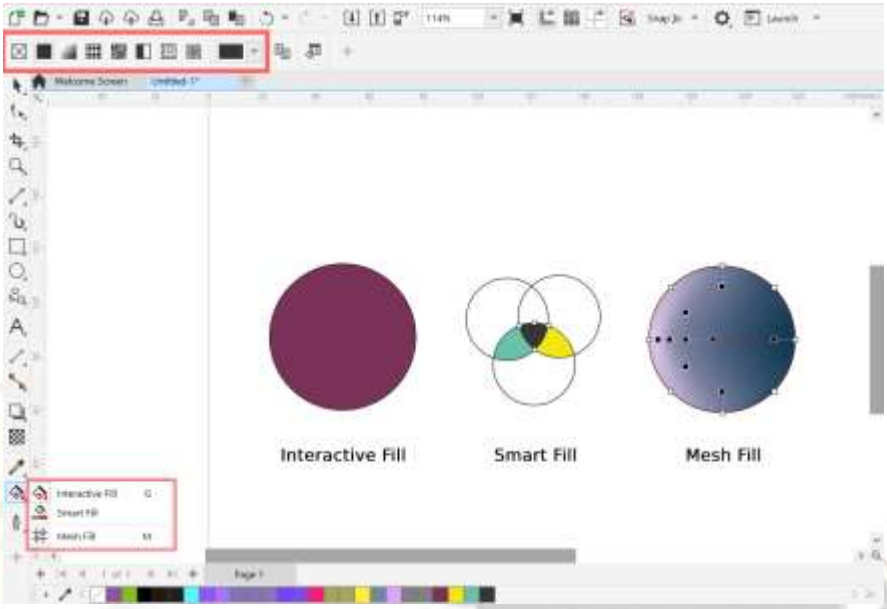

23. Interactive Fill tool

The Interactive Fill Tool is used to apply different types of fills to an object, such as solid colors, gradients, patterns, and other presets.

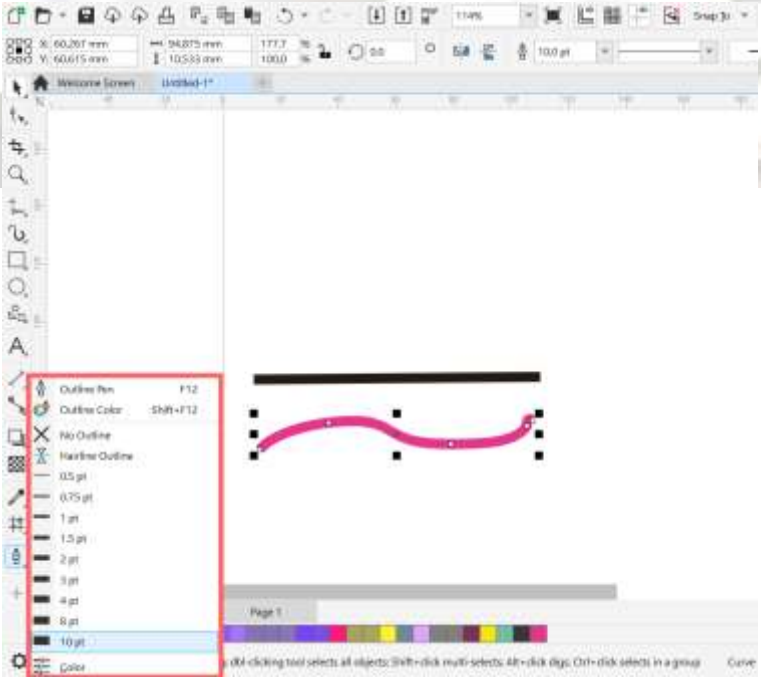

It also includes additional tools:

- Smart Fill Tool: Used to apply colors to specific enclosed areas of objects.
- Mesh Fill Tool: Used to apply and adjust gradient colors using mesh lines and control points.

24. Outline tool

The Outline Tool is used to adjust the width, thickness, and color of an object's outline.

Short Questions

1. What is the function of the Pick Tool?
2. What is the purpose of the Smudge Tool?
3. Differentiate between the Knife Tool and Eraser Tool.
4. What is the function of the Virtual Segment Delete Tool?
5. What is the purpose of the Interactive Fill Tool?

Long Questions

1. Explain the Shape Tool, Smooth Tool, and Roughen Tool with their functions.
2. Explain the Crop Tool and its additional tools.
3. Describe the Shadow Tool and explain its additional tools.
