Lab No. 10:

Object Reshaping and Creative Designing

(Attract and Repel Tool, Smudge Tool and Roughen Tool)

Objective:

To learn how to reshape objects and create different artistic effects using object-reshaping tools in CorelDRAW.

Theory

1. Attract and Repel Tool

This tool is used to change the shape of an object by pulling its edges inward or pushing them outward.

2. Smudge Tool

The Smudge Tool is used to modify the outline of an object and create rounded or curved shapes.

3. Roughen Tool

The Roughen Tool is used to create rough, sharp, or jagged edges on an object. It can also be used to create grass-like effects.

Practical Work

1. Open a new document in CorelDRAW.
2. Draw a basic object using shape tools.
3. Select the Attract and Repel Tool.
4. Apply inward and outward effects to the object.
5. Draw another object and apply the Smudge Tool.
6. Use the Roughen Tool to create rough edges.
7. Compare the original and modified objects.

Lab Tasks

Task 01: Design a tree using vector shapes.

Task 02: Design a leaf using object-reshaping tools.

Task 03: Design a flower using different reshaping effects.

Task 04: Create three different creative shapes using Smudge and Roughen Tools.
