Lab No. 11:

CUTTING AND CROPPING OBJECTS

OBJECTIVE

To understand and practice different object-editing tools in CorelDRAW. Students will learn how to crop objects, cut shapes, remove unwanted portions, and modify objects using the following tools:

- Crop Tool
- Knife Tool
- Eraser Tool
- Virtual Segment Delete Tool
- Shape Tool (for rounding rectangle corners)
- Basic Shape Tools

THEORY

In CorelDRAW, object-editing tools are used to modify shapes, remove unwanted areas, and create new designs from existing objects.

1. Crop Tool

The Crop Tool is used to remove unwanted portions of an object or selected design area. It helps to keep only the required part of an image or design.

2. Knife Tool

The Knife Tool is used to cut an object into two or more separate pieces. After cutting, each part can be moved, edited, or colored separately.

3. Eraser Tool

The Eraser Tool is used to erase unwanted portions of an object. It helps modify the shape by removing specific areas.

4. Virtual Segment Delete Tool

The Virtual Segment Delete Tool is used to remove unwanted line segments between intersecting objects or curves. It helps clean and modify complex designs.

5. Shape Tool

The Shape Tool is used to edit the nodes of an object. It can be used to make sharp rectangle corners rounded by adjusting the corner nodes.

PRACTICAL TASKS

Task 1: Design a House or Building Using Basic Shapes

Procedure:

1. Select the Rectangle Tool and draw a large rectangle for the main building.
2. Use the Triangle Tool or Polygon Tool to create the roof.
3. Draw small rectangles for the door and windows.
4. Use the Ellipse Tool to add circular design elements if required.
5. Arrange all the shapes to create a complete house.
6. Apply suitable colors to the roof, walls, doors, and windows.
7. Align the objects properly to complete the design.

Task 2: Create Different Shapes by Cutting and Removing Unwanted Parts

Procedure:

1. Draw a circle, rectangle, and star using the appropriate Shape Tools.
2. Select an object and use the Knife Tool to cut it into separate parts.
3. Use the Eraser Tool to remove unwanted portions of an object.
4. Practice the Crop Tool to remove unwanted areas from a selected design or image.
5. Modify the remaining parts and apply different colors.
6. Create at least two new shapes using cutting and removing techniques.

Task 3: Practice the Knife Tool and Virtual Segment Delete Tool on Different Objects

Procedure:

1. Draw different objects such as circles, rectangles, stars, and other shapes.
2. Overlap two or more objects to create intersecting lines.
3. Select the Knife Tool and cut different objects into two or more pieces.
4. Move the separated parts to observe the cutting result.
5. Create another design using overlapping lines and shapes.
6. Select the Virtual Segment Delete Tool.
7. Click on unwanted line segments between intersecting objects to remove them.
8. Apply different colors and complete the designs
