Lab No. 09:

Basic Object Selection and Editing

(Pick Tool, Shape Tool, Smooth Tool, Smear Tool and Swirl Tool)

Objective:

To learn how to select, resize, move, rotate, and modify objects using different object-editing tools in CorelDRAW.

Theory

Pick Tool

The Pick Tool is used to select objects and change their size, position, and rotation.

Shape Tool

The Shape Tool is used to modify the shape of objects by adjusting their nodes. It can make corners rounded or pointed.

Smooth Tool

The Smooth Tool is used to smooth rough edges and make uneven lines look smoother.

Smear Tool

The Smear Tool is used to change the shape of an object by dragging its edges inward or outward.

Swirl Tool

The Swirl Tool is used to create twisting or rotating effects on an object.

Practical Work

1. Open CorelDRAW 2025.
2. Create a new document.
3. Draw different shapes using the available shape tools.
4. Select objects using the Pick Tool.
5. Resize, move, and rotate the objects.
6. Use the Shape Tool to modify object nodes.
7. Apply the Smooth Tool to an irregular shape.
8. Use the Smear Tool to create curved shapes.
9. Apply the Swirl Tool to create a twisting effect.

Lab Tasks

Task 01: Draw rectangular objects of equal size.

Task 02: Create different shapes and align them properly.

Task 03: Reshape objects such as fruits and face parts.

Task 04: Transform an object by resizing, rotating, and repositioning it.
