Course Title: Graphic Designing

Course Code: CIT - 344

LECTURE 04:

INTRODUCTION TO CORELDRAW

Chapter Overview

6.1 What is CorelDraw?

6.2 Kinds of Designing

6.3 Kinds of Media

Prepared by: **Engr. Miss. Ayesha Zulfiqar**

6.1 What is CorelDRAW?

Definition

CorelDraw is a vector graphics designing software used to create logos, brochures, visiting cards, posters, banners, illustrations, and other graphic designs.

It is widely used by graphic designers, printing businesses, advertising agencies, and sign-making professionals.

What is Graphic Designing?

Graphic designing is the process of creating visual content by combining text, images, shapes, lines, and colours to communicate a message or information.

For example, a company logo, an advertisement poster, or a visiting card is a form of graphic design.

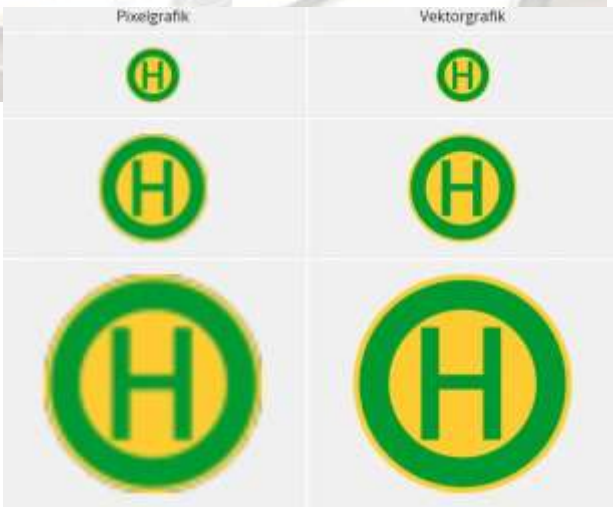

What is Vector Graphics?

CorelDRAW is primarily a vector graphics editor.

Vector graphics are images created using mathematical paths, lines, curves, and shapes. They can be resized without losing their sharpness.

For example, a logo created in vector format can be used on a small visiting card or a large billboard while maintaining its quality.

Vector Graphics	Raster Graphics
Can be enlarged without losing sharpness.	Made of pixels; enlargement may cause blurring.

Important Features of CorelDraw

1. **Vector Drawing:** Create shapes, lines, curves, and illustrations.
2. **Text Designing:** Create headings, artistic text, and attractive typography.
3. **Colour Management:** Apply fill colours, outlines, gradients, and transparency.
4. **Object Editing:** Resize, rotate, reshape, duplicate, and align objects.
5. **Page Layout:** Arrange text and graphics for posters, brochures, and cards.
6. **Import and Export:** Import images and export designs into supported file formats.

Common Tools in CorelDraw

Tool	Purpose
Pick Tool	Select, move, resize, and rotate objects
Shape Tool	Edit nodes and reshape objects
Rectangle Tool	Draw rectangles and squares
Ellipse Tool	Draw circles and ellipses
Text Tool	Add and format text
Freehand/Pen Tool	Draw lines and curves
Fill Tool	Apply colours and fills
Transparency Tool	Make objects partially transparent

Common Uses of CorelDRAW

- Logo designing
- Visiting card designing
- Brochure and flyer designing
- Poster and banner designing
- Flex sign designing
- Illustration and drawing
- Textile pattern designing
- Packaging and label designing

Advantages of CorelDRAW

- It is suitable for vector-based graphic designing.
- Vector artwork can be resized without losing sharpness.
- It provides tools for drawing and editing objects.
- It supports text and graphic layouts.
- It can export designs into different supported formats for printing and digital use.

Common File Formats

Format	Purpose
CDR	CorelDRAW's native editable format
PDF	Document sharing and printing
PNG	Digital images, including transparency when supported
JPG/JPEG	Photographs and web images
SVG	Scalable vector graphics
EPS	Vector artwork exchange and print workflows

6.2 Kinds of Designing

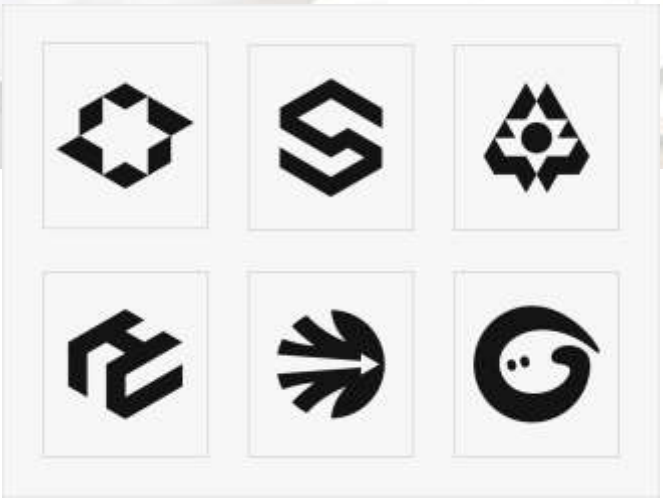

Definition

Designing is the process of planning and creating a visual or functional arrangement to communicate information, solve a problem, or improve appearance.

Different types of designing are used for different purposes.

1. Logo Designing

Logo designing is the creation of a visual symbol or wordmark that identifies a company, organization, product, or brand.

Examples: Company logos, institute logos, clothing brand logos.

Software: CorelDRAW, Adobe Illustrator.

2. Print Media Designing

Print media designing involves creating layouts and graphics intended to be printed on paper or other physical materials.

Examples: Visiting cards, brochures, flyers, magazines, newspapers, and letterheads.

3. Advertisement Designing

Advertisement designing is used to promote products, services, businesses, events, or offers.

Examples: Sale posters, product advertisements, promotional banners.

4. Social Media Designing

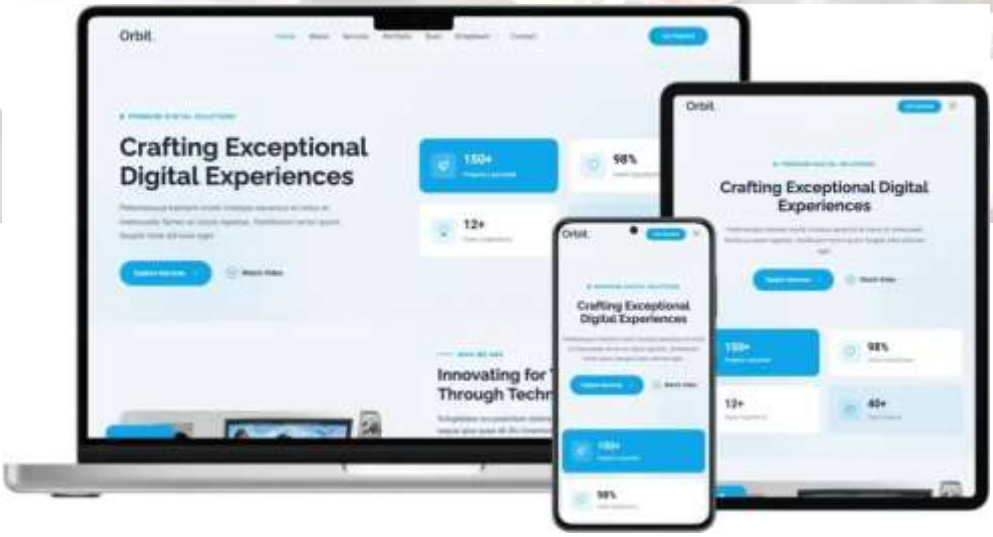

Social media designing involves creating visual content for online platforms to communicate information, attract attention, or promote a brand.

Examples: Instagram posts, Facebook covers, promotional stories.

5. Web Designing

Web designing focuses on the layout, appearance, and user experience of websites and web pages.

Examples: Website headers, banners, landing-page layouts, buttons, and interface graphics.

6. Illustration Designing

Illustration designing involves creating drawings or visual representations to explain an idea, tell a story, or decorate a design.

Examples: Fruits, flowers, cartoon characters, and vector illustrations.

7. Textile Designing

Textile designing involves creating patterns and decorative artwork for fabrics and clothing.

Examples: Floral patterns, shirt prints, dupatta designs, and embroidery motifs.

8. Packaging Designing

Packaging designing involves creating the appearance and layout of product packaging.

Examples: Product boxes, food labels, cosmetic packaging, and wrappers.

9. Typography Designing

Typography designing is the art of arranging letters and text to make written information attractive and readable.

Examples: Decorative headings, event titles, logos made with text, and quote posters.

10. Multimedia Designing

Multimedia designing combines two or more forms of media, such as text, images, sound, video, and animation, to communicate information.

Examples: Animated presentations, video title screens, educational media, and interactive content.

Difference between different kinds of designing

Type	Main Purpose
Logo Designing	Brand identity
Print Media Designing	Printed communication
Advertisement Designing	Promotion
Social Media Designing	Online engagement and promotion
Web Designing	Website appearance and usability
Illustration Designing	Visual explanation or decoration
Textile Designing	Fabric patterns
Packaging Designing	Product presentation
Typography Designing	Visual arrangement of text
Multimedia Designing	Communication through multiple media

6.3 Kinds of Media

Definition

Media refers to the channels, platforms, or formats used to communicate information, news, ideas, and messages to an audience.

In graphic designing, media determines how a design is presented to people.

1. Print Media

Print media communicates information through printed materials.

Examples:

- Newspapers
- Magazines
- Books
- Brochures
- Flyers
- Posters
- Business cards

Characteristics:

- Available in physical form.
- Can be distributed directly to people.
- Requires suitable printing and material preparation.

2. Digital Media

Digital media communicates information through electronic devices and digital platforms.

Examples:

- Websites
- Social media posts
- Digital advertisements
- E-books
- Online banners
- Digital presentations

Characteristics:

- Viewed on electronic devices.
- Easy to distribute online.
- Can include links, animation, audio, or video.

3. Broadcast Media

Broadcast media delivers audio or video content to a large audience through broadcasting systems.

Examples: Television programmes, radio programmes, and televised advertisements.

Characteristics:

- Reaches a wide audience.
- Can deliver information through sound and moving images.
- Requires broadcasting or distribution systems.

4. Outdoor Media

Outdoor media is displayed in public places to communicate messages to people outside their homes.

Examples: Billboards, flex signs, shop signboards, and outdoor posters.

Characteristics:

- Designed to attract attention from a distance.
- Uses readable text and visible graphics.
- Often printed in large sizes or displayed digitally.

5. Social Media

Social media platforms allow users and organizations to share content and communicate with audiences online.

Examples: Facebook, Instagram, YouTube, and LinkedIn.

Characteristics:

- Supports sharing and interaction.
- Can distribute text, images, videos, and graphics.
- Useful for marketing, education, and announcements.

Important distinction: Social media is a type of digital media. It is listed separately here because it is an important communication channel for graphic designers.

Difference between Print Media and Digital Media

Print Media	Digital Media
Printed on physical materials	Displayed on electronic devices
Example: Flyer	Example: Instagram post
Distribution may require printing	Distribution can happen online
Changes usually require reprinting	Files can often be edited and updated
Uses print-ready specifications	Uses screen-appropriate specifications

Short Questions for Revision

1. What is CorelDRAW?
2. What are vector graphics?
3. Write any five uses of CorelDRAW.
4. Define logo designing.
5. What is print media?
6. What is digital media?
7. Differentiate between print media and digital media.
8. What is textile designing?
9. Define typography designing.
10. What is multimedia designing?

Quick classroom quiz

1. CorelDRAW is primarily used for:

Video editing
Vector graphic designing
Audio recording

2. Which file format is CorelDRAW's native format?

CDR
MP3
TXT

3. A visiting card is an example of:

Print media design
Broadcast media
Audio media

4. An Instagram promotional post is an example of:

Print media only
Digital media
Broadcast radio

5. Designing patterns for fabric is called:

Textile designing
Web hosting
Audio mixing
Reset quiz
